Laravel and PHP Developer with over 1 year Freelancing and 9 months of Company hands-on experience, including professional roles, internship, and freelance projects. Adept at building scalable and efficient web applications with a strong foundation in Laravel, Core PHP, and RESTful APIs. Experienced in relational and non-relational databases including MySQL, PostgreSQL, and MongoDB. Skilled in developing responsive and user-friendly interfaces using Bootstrap, Tailwind CSS, and custom CSS.

## EDUCATION

Kadi University Gandhinagar - Bsc Computer Science

CGPA : 8.24

March 2023

Gujarat University Ahmedabad - Msc IT Mobile App & UI

CGPA : 8.77 (Sem - 3)

## EXPERIENCE

### PHP & Laravel Developer

**Antinoob Solutions** | Jan 2025 – Present

- At Antinoob Solutions, I worked as a full-time PHP & Laravel Developer, where I got the opportunity to dive deep into both backend and frontend development. My primary focus was building scalable and efficient web applications using Laravel, and creating responsive UI using Bootstrap, Tailwind CSS, and custom CSS.
- I collaborated closely with the design and product teams to bring ideas to life, debugged complex issues, and constantly refined features for better performance and user experience. This role helped me sharpen my problem-solving skills and work in a fast-paced team environment.

### PHP & Laravel Developer Intern

**Epicalyx Solution** | August 2024 – December 2024

- My journey in the development world started with a 4-month internship at Epicalyx Solution. Here, I learned the fundamentals of PHP and how real-world projects are structured. I was introduced to MVC architecture and got hands-on experience in building dynamic pages and connecting them to MySQL databases.
- It was a crucial phase where I understood how to write clean code, work with teams, and apply theoretical knowledge to practical scenarios. This experience laid the groundwork for everything I built after.

### Freelance Web Developer

**Self-employed** | Jan 2024 – Present

- Over the past year, I've taken on freelance projects that allowed me to explore real client requirements and deliver fully functional websites. I built various custom PHP-based solutions — from landing pages and admin dashboards to simple CMS systems.
- On the frontend, I used Bootstrap, Tailwind CSS, and CSS to craft clean and responsive designs. Freelancing not only helped me improve my technical stack but also strengthened my skills in communication, time management, and independent problem-solving.

## SKILLS

**Backend** : PHP, Laravel,

**Database** : Mysql, PostgreSQL, Mongoddb

**Frontend** : Custom CSS, Tailwind CSS, Bootstrap

**Application** : Flutter, Android

# PROJECTS

## Aufferly – Applicant Tracking System (ATS)

- **Tech Stack : Laravel, Bootstrap, CSS, REST APIs and Combination of PostgreSQL and MongoDB**
- Aufferly is a fully functional Applicant Tracking System developed to manage the complete hiring process—from job postings and applications to interview scheduling and offer generation. Built with Laravel and a responsive UI using Bootstrap and Tailwind CSS, it features multi-role access, resume management, and advanced search capabilities. This project highlights my ability to deliver real-world web applications with a focus on functionality and user experience.

## FMS – Infra & Facility Management Software

- **Tech Stack : CodeIgniter (CI), MySQL, Bootstrap, Custom CSS**
- FMS is a web-based Infra & Facility Management Software designed to efficiently manage infrastructure services and facility operations. Developed using CodeIgniter and MySQL, with a custom-styled frontend built in Bootstrap and CSS, the system handles tasks such as asset tracking, maintenance scheduling, service requests, and vendor coordination. This project demonstrates my experience in building structured, database-driven applications tailored to operational management needs.

## Architect Admin Management Software

- **Tech Stack : PHP, MySQL, Tailwind CSS, REST APIs**
- This is a comprehensive admin management system designed for architecture firms to manage projects, site activities, tasks, team coordination, and transactions from a single platform. Built with PHP and MySQL, the software features a clean UI using Bootstrap and CSS, and integrates REST APIs to handle dynamic operations and data flow. The system streamlines day-to-day management for architects, enhancing productivity and project tracking efficiency.

## Relig Staffing Management Website

- **Tech Stack : PHP, MySQL, Tailwind CSS, REST APIs**
- Relig Staffing is a staffing management website built with a dynamic job posting system. While the main site is static, an admin panel allows HR teams to post, edit, and manage job openings. Candidates can apply directly through the website, triggering automated email notifications to both the applicant and the company. The system simplifies job application tracking while maintaining a user-friendly interface for both admins and candidates.

## JAL – Mineral Water Delivery Management Software (Freelancing Project)

- **Tech Stack : Laravel, MySQL, Bootstrap, REST APIs**
- JAL is a custom software solution developed for a mineral water plant to manage its daily operations, including deliveries, customer management, payments, and bill generation. The system allows admins to add and track delivery boys, generate receipts, and handle real-time order tracking. Built with Laravel and integrated REST APIs, JAL ensures smooth coordination between the plant, customers, and delivery personnel, streamlining the entire delivery and billing process.

## Service Management System – Bahuchar Infocare (Freelancing Project)

- **Tech Stack : PHP, MySQL, CSS, REST APIs**
- This software was developed for Bahuchar Infocare to streamline operations at their electronics service center, managing devices like laptops, PCs, and mobile phones. It includes modules for service tracking, product and inventory management, quotation generation, billing, and accounting. The system centralizes all service-related workflows, helping the business operate more efficiently and maintain accurate records across departments.
